

ChatGPT: Basic prompting

- **Generate a data set:**

Prompt Sample:

Provide a CSV file containing anonymized patient data of at least 350 rows, including variables such as age, gender, region, symptoms, diagnosis, treatment plan, outcomes and any other relevant columns.

- **Generate analysis objective(s) and analysis questions:**

Prompt Sample:

I want to perform a comprehensive analysis on "Student sleep patterns" with Dataset below, provide meaningful questions a data analyst will ask, make it 7-10 questions, add an introductory part that will serve as the objective of the analysis and that will justify the questions asked.

- **Summarise findings from an analysis table:**

Prompt Sample:

The table below is a table on Age distribution of students in a study, provide a concise summary of the table.

- **Power point presentation/slide creation:**

Prompt sample:

I want you to write me a VBA code for a power point presentation about the history of data analytics. You are to fill in all the text with your own knowledge, no placeholders. I need 5 slides.

- **Power point slide creation from analysis tables and findings:**

Prompt Sample:

I want you to write me a VBA code for a power point presentation based on the tables I'll be uploading, you'll use the findings from the tables and other relevant sources as the text, no placeholders. I need 7-10 slides, after which you'll include a conclusion and recommendations slides. I will first upload the analysis objective (also include it in the slides), then I'll be uploading the tables one at a time, after every upload, I'll need you to respond with "next", until I tell you "Done", then you start the code generation.
