

DATA ANALYTICS BOOTCAMP

Uloh C. Armstrong

❑ MEANING AND SCOPE OF STATISTICS.

Statistics is a branch of mathematics and a scientific discipline concerned with collecting, organizing, analyzing, interpreting, and presenting data.

It involves methods and techniques used to gather, summarize, and draw conclusions or inferences from data.

Statistics

[stə-'ti-stiks]

A branch of applied mathematics that involves the collection, description, analysis, and inference of conclusions from quantitative data.

□ **TYPES OF STATISTICS.**

Descriptive statistics:

Describes and summarizes data through measures such as mean, median, mode, etc.

Inferential statistics:

Uses sample data to make inferences or predictions about a larger population

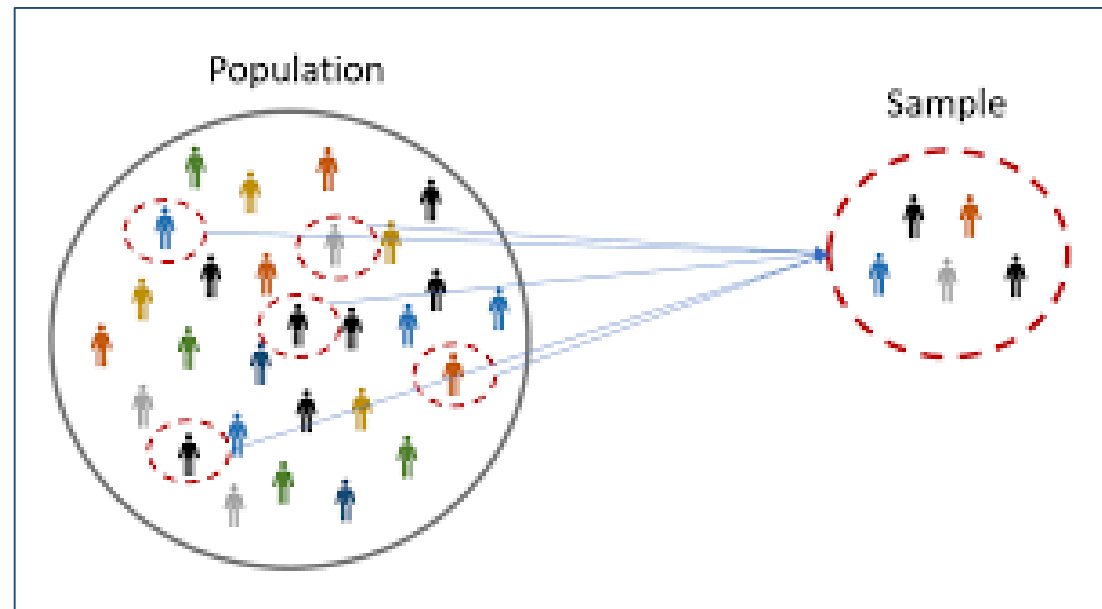

□ **POPULATION AND
SAMPLE**

Population:

This is a set of all objects or units about which conclusions are to be drawn.

Sample:

A subset of a population.

□ **STATISTICAL DATA.**

□ **TYPES OF DATA.**

□ **CLASSES AND SOURCES
OF DATA.**

GRAPHICAL PRESENTATION OF DATA.

TYPES OF GRAPHICAL REPRESENTATION

Bar Graphs

Histograms

Frequency Table

Rulers of France		
Reign (Years)	Tally	Frequency
1-15		18
16-30		11
31-45		6
46-60		4
61-75		1

Circle Graph

Line Graphs

Stem and Leaf Plot

Stem	Leaf
0	1, 1, 2, 2, 3, 4, 4, 4, 4, 5, 8
1	0, 0, 0, 1, 1, 3, 7, 9
2	5, 5, 7, 7, 8, 8, 9, 9
3	0, 1, 1, 1, 2, 2, 2, 4, 5
4	0, 4, 8, 9
5	2, 6, 7, 7, 8
6	3, 6

Key : 6 | 3 = 63 Year

Line Plot

Box and Whisker Plot

The **arithmetic mean**, commonly known as the **average**, is a measure of central tendency used to represent a set of numerical data

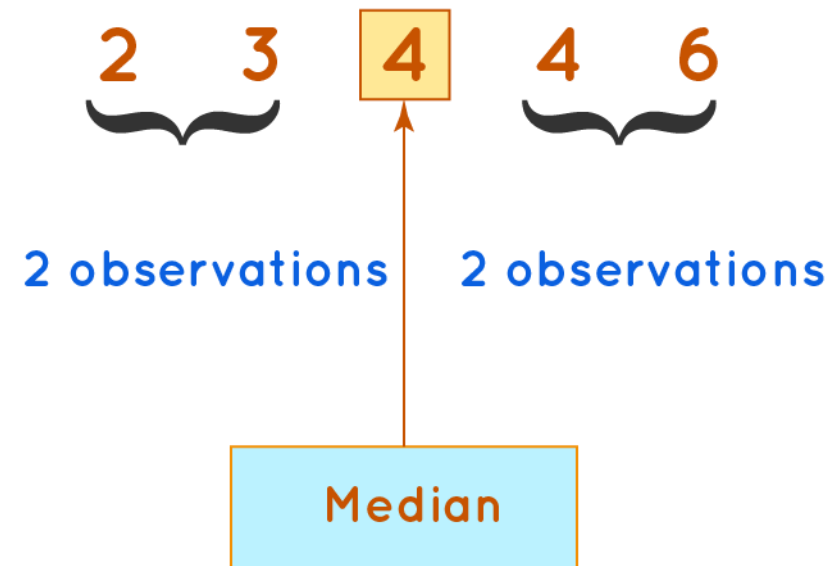

ARITHMETIC MEAN.

		Arithmetic Mean = $x_1 + x_2 + x_3 + \dots + x_n / n$	$= (B3+B4+B5+B6+B7+B8+B9)/B11$
	A	B	D
2	Sr.No	Division A	
3	Student 1	56	
4	Student 2	60	
5	Student 3	56	
6	Student 4	64	
7	Student 5	70	
8	Student 6	55	
9	Student 7	50	
10			
	Number of Students (n)	7	
12	Arithmetic Mean	$= (B3+B4+B5+B6+B7+B8+B9)/B11$	
13			

The **median** represents the middle value in a dataset when arranged in ascending or descending order.

□ **MEDIAN.**

Median of Data

The **mode** is the value/values within a dataset that occur most frequently.

□ **MODE.**

Mode

['mōd]

The value that appears most frequently in a data set. A set of data may have one mode, more than one mode, or no mode at all.

□ **QUARTILES.**

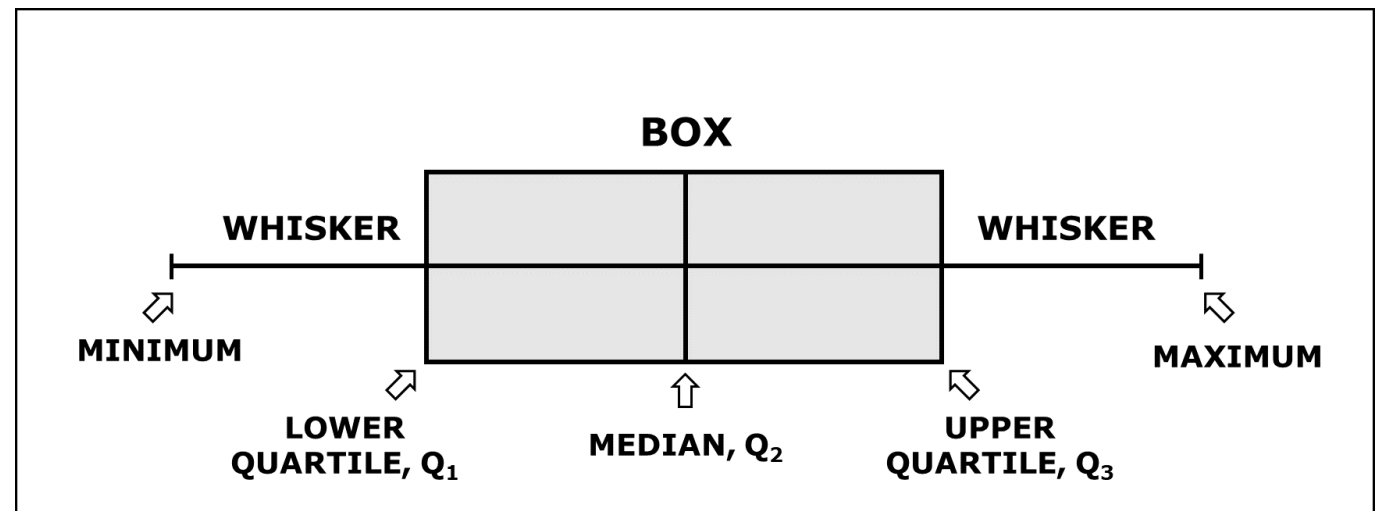

Quartiles are values that divide a dataset into four equal parts, each representing 25% of the data when arranged in ascending or descending order.

A **box plot**, also known as a **box-and-whisker plot**, is a graphical representation that displays the distribution, central tendency, and variability of numerical data through five summary statistics:

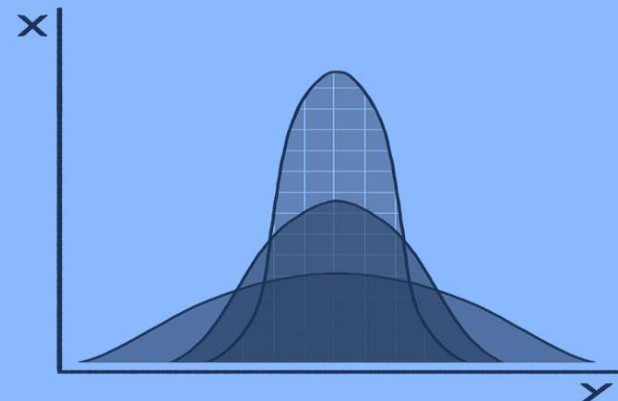

minimum, first quartile (Q_1), median (Q_2), third quartile (Q_3), and maximum

□ **BOX & WHISKERS PLOT (BOX PLOT).**

□ **THE VARIANCE.**

The **Variance** is a measure of how spread out the values in a data set are. It is closely related to the standard deviation, but it is expressed in a different unit of measurement.

Variance

['ver-ē-an(t)s]

A measurement of how far each number in a data set is from the mean (average), and thus from every other number in the set.

The **Standard deviation** is a measure of how spread out the values in a data set are. It is a way of quantifying the amount of variation in a set of data

□ **STANDARD DEVIATION.**

The **range** in statistics refers to the difference between the highest and lowest values within a dataset.

□ **RANGE.**

□ **CORRELATION ANALYSIS.**

Correlation analysis is a statistical technique used to measure and describe the strength and direction of the relationship between two variables.

❑ Basic **STATISTICS**

❑ Meaning and scope of statistics.

❑ Types of statistics.

❑ Statistical data.

❑ Types of data.

❑ Classes and sources of data.

❑ Graphical presentation of data.

❑ Arithmetic mean.

❑ Median.

❑ Mode.

❑ Quartiles.

❑ Box & Whiskers plot (Box plot).

❑ The Variance

❑ Standard deviation.

❑ Range.

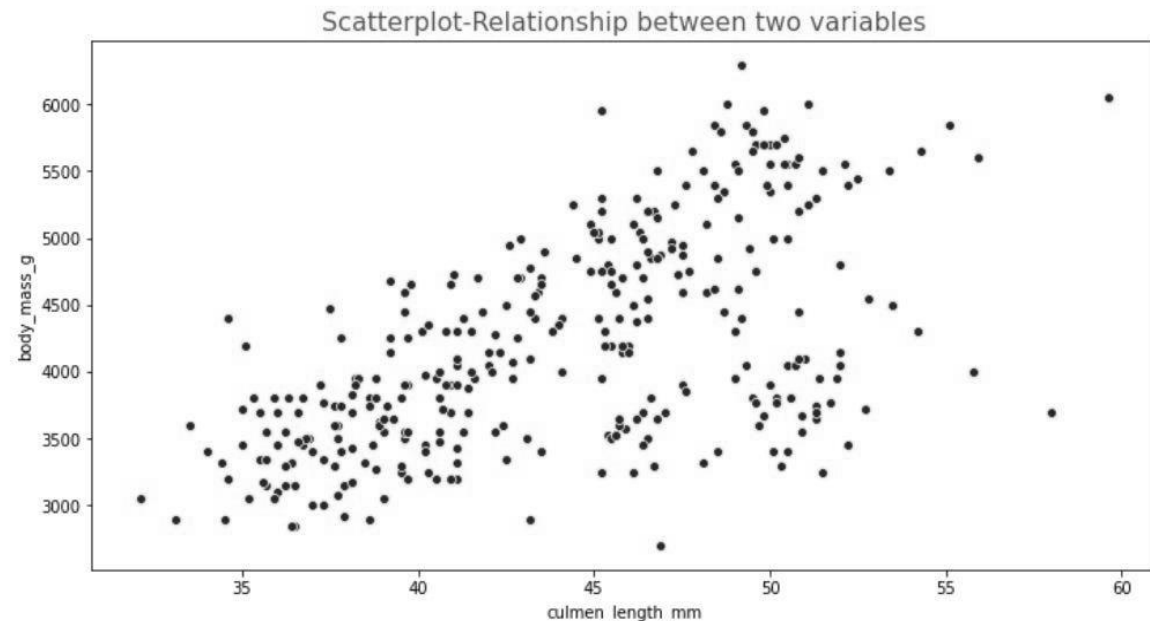

❑ Correlation analysis.

❑ **SCATTER DIAGRAM.**

❑ Regression Analysis

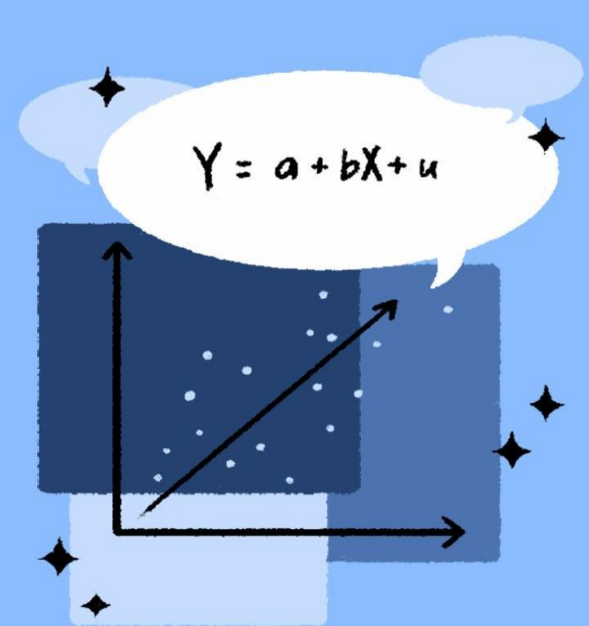

A **scatter plot**, also known as a **scatter diagram** or **scatter graph**, is a type of data visualization that displays the relationship or association between two numerical variables.

It helps to visualize how changes in one variable are related to changes in another variable.

□ **Regression Analysis**

Regresssion analysis is a statistical method used to model relationship between two or more variables. It is a way of determining how a change in one variable is associated with a change in another variable.

Regression
[ri-'gre-shən]

A statistical method used in finance, investing, and other disciplines that attempts to determine the strength and character of the relationship between one dependent variable (usually denoted by Y) and a series of other variables (known as independent variables).
